			ART UNIT 2137	PAPER NUMBER
SHORTENED STATUTORY PERIOD OF RESPONSE		MAIL DATE	DELIVERY MODE	
3 MONTHS		02/22/2007	PAPER	

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Office Action Summary

**Application No.**

09/663,891

**Applicant(s)**

CHOJNACKI, ROBERT

**Examiner**

Nadia Khoshnoodi

**Art Unit**

2137

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 20 November 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-4, 6 and 8-39 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4, 6 and 8-39 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 18 September 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/20/2006 has been entered.

***Response to Amendment***

Claims 5 and 7 have been cancelled. Applicant's arguments/amendments with respect to amended claims 1 and 8 and previously presented claims 2-4, 6, & 9-39 filed 11/20/2006 have been fully considered and therefore the claims are rejected under new grounds.

***Claim Rejections - 35 USC § 102***

I. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

II. Claims 8-9 are rejected under 35 U.S.C. 102(e) as being fully anticipated by Chan, US

Patent No. 6,473,860.

As per claim 8:

Chan teaches a system for secure on-line mass distribution of data products to end users comprising: an authorization server at a first location having associated therewith copies of first portions of a plurality of data products, wherein said first portions of the data products do not include information to enable encrypted data to be decrypted (col. 11, lines 11-13); a plurality of data distribution terminals at a plurality of locations different from said first location, each of said data distribution terminals has stored thereon copies of second portions of said plurality of data products (col. 10, line 52 – col. 11, line 4); a communications system that provides for exchange of data between the entity and said plurality of data distribution terminals (col. 11, lines 7-9), and a data distribution program that provides copies of said data products to those end users who are entitled to have said copies thereof (col. 11, lines 7-11); wherein said data distribution program provides a copy of a data product by combining a copy of the first portion of said data product obtained from said authorization server with a copy of the second portion of said data product obtained from one of said plurality of data distribution terminals, wherein said step of combining is performed at a location of said one of said plurality of data distribution terminals and said end user is located at said location of said one of said plurality of data distribution terminals (col. 11, lines 39-45) .

As per claim 9:

Chan teaches the system, as applied to claim 8 above. Furthermore, Chan teaches wherein said authorization server also has associated therewith an authorization database containing data indicating entitlement by said end users to copies of said data products (col. 10, lines 24-45).

*Claim Rejections - 35 USC § 103*

III. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

IV. Claims 1, 3-4, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chan, US Patent No. 6,473,860 and further in view of McMullan Jr. et al., US Patent No. 5,654,746.

As per claim 1:

Chan substantially teaches a method for on-line mass distribution of data products to end users, the method comprising: maintaining a first portion of each of said data products at a first location (col. 10, lines 52-67 and col. 11, lines 9-11), maintaining an unencrypted second portion of each of said data products at a second location, wherein the second location is different from said first location (col. 10, lines 52-67 and col. 11, lines 1-2); for each of said end users, confirming the end user's entitlement to one of said data products (col. 11, lines 11-13); obtaining an unencrypted second portion of said one of said data products from said second location (col. 11, lines 1-5); after said step of confirming, obtaining an encrypted first portion of said one of said data products at said second location from said first location, obtaining a decryption key and using said decryption key to decrypt said encrypted first portion (col. 11, lines 9-20); combining said decrypted first portion of said one of said data products and said unencrypted second portion of said one of said data products, wherein said step of combining is performed at said second location, wherein said end user is located at said second location (col.

Art Unit: 2137

11, lines 39-45), and providing said combined first portion and second portion to said user, wherein the first portion of said data product comprises critical data that enables a program executed on a computing platform to use said data product including both the first portion and the second portion together for an intended purpose (col. 11, lines 39-45).

Not explicitly disclosed is wherein the first portion is stored/maintained in an encrypted form on the central server. However, McMullan Jr. et al. teach control information of digital data is maintained in encrypted form at a server archive in order maintain the data's confidentiality. Furthermore, storing/maintaining critical data in an encrypted form is and has been very well known in the art for quite some time now. Therefore, it would have been obvious to a person in the art at the time the invention was made to modify the method disclosed in Chan to maintain/store the first portion of data at the first location in encrypted form as well. This modification would have been obvious because a person having ordinary skill in the art, at the time the invention was made, would have been motivated to do so since McMullan Jr. et al. suggest that it is well known to protect data that is stored by encrypting the data before storing in col. 2, lines 8-18 and col. 8, lines 26-40.

As per claim 3:

Chan and McMullan Jr. et al. substantially teach the method of claim 1. Furthermore, Chan teaches wherein said data products include digital copies of movies (col. 10, lines 52-55).

As per claim 4:

Chan and McMullan Jr. et al. substantially teach the method of claim 1. Furthermore, McMullan Jr. et al. teach wherein said data products include digital copies of musical songs (col. 3, lines 49-58).

As per claim 6:

Chan and McMullan Jr. et al. substantially teach the method, as applied to claim 1 above. Chan teaches the method further comprising the step of prior to the step of combining, encrypting said first portion of one of said data products (col. 4, lines 25-33).

V. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chan, US Patent No. 6,473,860 and McMullan Jr. et al., US Patent No. 5,654,746 as applied to claim 1 above, and further in view of Porter et al., United States Patent No. 5,845,067

As per claim 2:

Chan and McMullan Jr. et al. substantially teach the method, as applied to claim 1 above. Not explicitly disclosed is the method, wherein said data products include geographic databases. However, Porter et al. teaches that a document can be any information stored as files in a file system, which can equate to the information contained by a geographic database. Therefore, it would have been obvious to a person in the art at the time the invention was made to modify the method disclosed in Chan et al. for the data product to include files of geographical information stored in a file system, which is equivalent to a database. This modification would have been obvious because a person having ordinary skill in the art, at the time the invention was made, would have been motivated to do so since it is suggested by Porter et al. in col. 7, lines 26-32.

VI. Claims 10-22, and 24-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chan, US Patent No. 6,473,860 and further in view of Ginter et al., United States Patent No. 6,237,786.

As per claims 10 and 24:

Chan substantially teaches a system/method comprising, in combination: a first entity maintaining the first portion of the data product at a first location (col. 10, lines 52-67); a second entity maintaining the second portion of the data product at a second location different from said first location (col. 11, lines 11-15); a first set of logic executable by the first entity to encrypt the first portion so as to produce an encrypted first portion that can be decrypted using a first decryption key, wherein the first entity sends the encrypted first portion via a telecommunications link to the second entity (col. 11, lines 9-20); a second set of logic executable by the second entity, upon receipt of the encrypted first portion, to record onto the storage medium the encrypted first portion and the second portion wherein an end user of the data product is located at said second location where the encrypted first portion and the second portion are recorded onto the storage medium (col. 11, lines 11-20); and wherein the first portion of said data product comprises critical data that enables a program executed on a computing platform to use said data product including both the first portion and the second portion together for an intended purpose (col. 11, lines 39-45).

Not explicitly disclosed is the third entity gaining access to the first decryption key in order to access the data product. However, Ginter et al. teach that in order for a third party, or any party for that matter, to gain access to the data product they must first have the appropriate decryption key. Therefore, it would have been obvious to a person in the art at the time the invention was made to modify the method disclosed in Chan for a third entity to gain access to the first decryption key in order to access the data product. This modification would have been obvious because a person having ordinary skill in the art, at the time the invention was made, would have been motivated to do so since it is suggested by Ginter et al. in col. 131, lines 18-44.

As per claims 11 and 25:

Chan and Ginter et al. substantially teach the method/system as applied to claims 10 and 24. Furthermore, Ginter et al. teach the method/system wherein the first entity sends to the second entity, together with the encrypted first portion, an encrypted authorization key that can be decrypted using a second decryption key so as to reveal verification information indicative of an entity authorized to access the data product, and wherein the second set of logic is further executable to record onto the storage medium the encrypted authorization key (col. 14, lines 21-43 and col. 22, lines 13-45).

As per claims 12 and 26:

Chan and Ginter et al. substantially teach the method/system as applied to claims 11 and 25. Furthermore, Ginter et al. teach the method/system wherein the second decryption key is derived as a function of an environmental parameter (col. 22, lines 13-45).

As per claims 13 and 27:

Chan and Ginter et al. substantially teach the method/system as applied to claims 12 and 26. Furthermore, Ginter et al. teach the method/system wherein the environmental parameter comprises an identification code associated with the entity authorized to access the data product (col. 22, lines 13-45).

As per claims 14 and 28:

Chan and Ginter et al. substantially teach the method/system as applied to claims 11 and 27. Furthermore, Ginter et al. teach the method/system wherein the third entity generating the second decryption key as the function of the identification code; the third entity using the second decryption key to decrypt the encrypted authorization key and to thereby gain access to the

verification information; and the third entity using the verification information to validate storage of the data product (col. 131, lines 18-44).

As per claims 15 and 29:

Chan and Ginter et al. substantially teach the method/system as applied to claims 11 and 25. Furthermore, Ginter et al. teach the method/system wherein a third set of logic executable by a third entity to decrypt the encrypted authorization information, to thereby gain access to verification information, and to compare at least a portion of the verification information to predetermined information associated with the third entity so as to determine whether the third entity is authorized to gain access to the data product (col. 131, lines 18-67).

As per claims 16 and 31:

Chan and Ginter et al. substantially teach the method/system as applied to claims 15 and 30. Furthermore, Ginter et al. teach the method/system wherein the predetermined information associated with the third entity comprises an identification code (col. 131, lines 40-44).

As per claims 17 and 30:

Chan and Ginter et al. substantially teach the method/system as applied to claims 10 and 29. Furthermore, Ginter et al. teach the method/system wherein the first entity sends to the second entity, together with the encrypted first portion, an encrypted authorization key that can be decrypted using a second decryption key so as to reveal verification information indicative of an entity authorized to access the data product (col. 14, lines 21-43 and col. 22, lines 13-45).

As per claims 18 and 33:

Chan and Ginter et al. substantially teach the method/system as applied to claims 17 and 32. Furthermore, Ginter et al. teach the method/system wherein the second decryption key is derived as a function of an environmental parameter (col. 22, lines 13-25).

As per claims 19 and 34:

Chan and Ginter et al. substantially teach the method/system as applied to claims 18 and 33. Furthermore, Ginter et al. teach the method/system wherein the environmental parameter comprises an identification code associated with the entity authorized to store the data product (col. 22, lines 13-25).

As per claims 20 and 35:

Chan and Ginter et al. substantially teach the method/system as applied to claims 11 and 34. Furthermore, Ginter et al. teach the method/system wherein the third entity generating the second decryption key as the function of the identification code; the third entity using the second decryption key to decrypt the encrypted authorization key and to thereby gain access to the verification information; and the third entity using the verification information to validate storage of the data product (col. 104, line 25 – col. 106, line 15).

As per claims 21 and 37:

Chan and Ginter et al. substantially teach the method/system as applied to claims 11 and 36. Furthermore, Ginter et al. teach the method/system wherein a third set of logic executable by a third entity to decrypt the encrypted authorization information, to thereby gain access to verification information, and to compare at least a portion of the verification information to predetermined information associated with the storage medium so as to determine whether the storage medium is authorized to gain access to store the data product (col. 78, lines 8-58).

As per claims 22 and 38:

Chan and Ginter et al. substantially teach the method/system as applied to claims 21 and 37. Furthermore, Ginter et al. teach the method/system wherein the predetermined information associated with the storage medium comprises an identification code (col. 22, lines 13-45).

As per claim 32:

Chan and Ginter et al. substantially teach the method as applied to claim 24. Furthermore, Ginter et al. teach the method further comprising sending to the second entity, together with the encrypted first portion, an encrypted authorization key that can be decrypted using a second decryption key so as to reveal verification information indicative of an entity authorized to store the data product (col. 14, lines 21-43 and col. 22, lines 13-45).

As per claim 36:

Chan and Ginter et al. substantially teach the method as applied to claim 32. Furthermore, Ginter et al. teach the method further comprising the third entity using the second decryption key to decrypt the encrypted authorization key and to thereby gain access to the verification information; and the third entity using the verification information to validate storage of the data product (col. 104, line 25 – col. 106, line 15).

VII. Claims 23 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chan, US Patent No. 6,473,860 and Ginter et al., United States Patent No. 6,237,786 as applied to claims 10 and 24 above, and further in view of Ahrens et al., United States Patent No. 5,951,620.

As per claims 23 and 39:

Chan and Ginter et al. substantially teach the method/system as applied to claims 10 and 24. Not explicitly disclosed is the method/system wherein the third entity comprises a

Art Unit: 2137

navigation system. However, Ahrens et al. teach the use of a navigation system. Therefore, it would have been obvious to a person in the art at the time the invention was made to modify the method disclosed in Chan for the third entity to be a navigation system. This modification would have been obvious because a person having ordinary skill in the art, at the time the invention was made, would have been motivated to do so since it is suggested by Ahrens et al. in col. 7, lines 29-44.
